## INDONESIA

### BACKGROUND

Cougar Drilling Solutions' client had a one-well slot in a shared offshore rig. The client wanted to ensure all contractors were as prepared as possible because any incidents would cost \$500,000 per day.

Since the contractor was occupied with high volume operations on other projects, our client was concerned that adequate attention would not get paid to the shared offshore rig. So they called Cougar DS.

### AUDIT PROCESS

- Our Optimized Well Delivery auditors reviewed the contract and well program to gain an in-depth understanding of the commitments and potential risk.
- Cougar DS visited the contractors' facilities to audit the supporting operational and quality assurance processes, and to assess contractor familiarity with the contract and client expectations. Our auditors paid special attention to the effectiveness of communications channels, and to risk management.
- We then completed an objective report identifying potential weaknesses, and offering suggested actions and contingencies. This allowed the client to work with the contractor to correct any deficiencies prior to mobilization.
